Evergreen & Gleam

Individual Website Design and Development

Prepared by Dontae Waite

Company concept: fictional home-cleaning and landscaping services

Technology: original HTML, external CSS, and vanilla JavaScript

Chosen design: Concept A - welcoming split-screen hero

01 / Project overview

Idea

Evergreen & Gleam is a fictional housekeeping and landscaping company that brings indoor cleaning and outdoor garden services together in one accessible, welcoming website. The website helps visitors explore services, estimate sample pricing and send an enquiry.

Audience

Homeowners, renters, and property managers looking for simple recurring cleaning, one-off refresh services and garden maintenance.

Pages delivered

Home, About, Services & Pricing, FAQs, Gallery, Contact and a dedicated 404 page. Additional Privacy and Thank You pages support a transparent visitor experience.

Site interactions

Accessible mobile menu, illustrative service-price estimator, local images and media, and a Netlify-compatible HTML form that can handle enquiries when Netlify forms detection is enabled.

Implementation

Hand-authored semantic HTML, one external CSS stylesheet, and small vanilla JavaScript enhancements. The project does not use CSS frameworks or third-party libraries.

Intended emotion

Clean, natural, calm, dependable, friendly and trustworthy. The interface uses generous spacing and understated contrast to reduce visual clutter.

Palette system

A nature-inspired analogous green scheme plus warm neutrals; intentionally designed without a palette-engine generator. Primary forest #1F493C, deep forest #14362D, sage #DCE8D2, leaf #648866, cream #F8F5ED, paper #FFFDF8 and warm gold #E8BD71.

Typography

Georgia provides an inviting editorial character for headings. An Inter / system sans-serif stack gives UI labels and body text a practical, legible appearance without requiring a remote font service.

Imagery and media

Locally stored original SVG illustrations illustrate neat interiors, gardens and patios. Sample MP4 video and WAV audio demonstrate media support; they are not represented as videos of actual customer jobs.

Mockup rationale

Concept A places a strong headline and clear enquiry CTA beside a home-and-garden visual. The chosen horizontal navigation collapses effectively to smaller screens. Concept B explores a bolder left navigation but is less suitable for mobile-first visitors.

03 / Five inspiration websites

Molly Maid

https://www.mollymaid.com/

Service-first presentation and clear residential-cleaning information.

MaidPro

https://www.maidpro.com/

Trust-focused cleaning messaging and checklist organization.

TruGreen

https://www.trugreen.com/

Lawn-care positioning and straightforward outdoor-service categories.

BrightView

https://www.brightview.com/

Natural landscaping visual language and clear service groupings.

Taskrabbit

https://www.taskrabbit.com/

Concise calls to action and service discovery patterns.

Inspiration only: the project does not copy third-party website code.

04 / Submission checklist

Completed:	Original HTML/CSS project with 6 primary pages and 404 page
Completed:	Two distinct mockups (SVG, PNG and mockup PDF)
Completed:	Custom SVG company logo and favicon
Completed:	Color scheme, emotional intent and font rationale
Completed:	Relative local asset paths and correct lowercase folders
Prepared:	Netlify configuration and Netlify-compatible contact form
Not yet done:	Public GitHub repository URL - requires account access
Not yet done:	Public Netlify deployment URL - requires account access
Not yet done:	Public mockup URL - available after Netlify deployment
Not yet done:	Live deployed browser-console and form-submission verification

Deployment instructions

1. Upload website folder contents to a GitHub repository root.
2. Import that repository into Netlify, no build command, publish directory ".".
3. Test /mockups/, /404.html, form submissions, mobile view and browser console.
4. Submit the three actual URLs: Netlify, GitHub repository and mockup gallery.
